Science Building Program Plan

The JBA team developed a program plan to bring all of the science programs from all three institutions together physically, concentrating the science disciplines into one locale. The program plan addressed the existing quantity, quality, and obsolescence of space needs as well as addresses the critical future path for all three institutions. The scope of the project would include renovation of an existing 143,000 in both the Science Building and the North Classroom Building where programs are being relocated, and the construction of 181, 346 gross square feet of new space adjacent to the Science Building.

JBA's role on the project was programmer, planner, project manager and project architect.

Budget: \$65,440,000

Date: 2004
