Colorado State University Fort Collins, Colorado

Space Model

Development of a new space model and needs assessment for the CSU campus. This included creating space standards/guidelines specific for Colorado State University, and developing a space model that can be used to study various facility planning and use scenarios. The intent was to do this by making the new model a live process that can reflect space needs at any given time for any given set of variables. This will identify the current and projected space needs on a departmental basis.

JBA's role on the project was programmer, planner, project manager and project architect.

Budget: N/A

Date: 2000
