Fitzsimons Library Program Plan

The current space allocated for the Denison Library program at the 9th Ave. and Colorado Blvd. location of the University of Colorado Health Sciences Center is inadequate to support changes in curricula, teaching, technology, and research. The overall vision for the Fitzsimons campus emphasizes that for the Health Sciences Center to maintain and enhance its ongoing commitment to form and reform educational programs that respond to health workforce needs, the library must be continuously responsive, dynamic, evaluation-conscious and future-oriented. The library will be the focal point to access information from emerging technologies. The library will be the hub of knowledge at Fitzsimons linking the critical components that comprise the institution's mission. The new library will embody the new campus' vision for its physical facilities by integrating the academic, research, and clinical endeavors of the institution. The library program plan was developed for the construction of a new 113,465 GSF facility to house the current Denison Library programs that will be relocated from the existing facility at 9th Avenue and Colorado Boulevard campus site.

JBA's role on the project was programmer, planner, project manager and project architect.

Budget: \$35 million

Date: 2001
