Lamar Community College Lamar, Colorado

Master Plan

JBA Incorporated worked with Lamar Community College to develop a master plan that would provide the College with a long term vision of the facilities and site needs associated with the College's ability to meet its mission, strategic plan and programmatic needs. The master plan is meant to guide the campus with regards to its facilities plans, not dictate it. The master plan is a macro-scale tool that should continually evolve as programs resources, facilities, and funding does.

Being a smaller campus allowed for the entire campus to be involved and have an opportunity to join the planning process. With campus input guided by the strategic plan program needs were developed and used to determine the facilities needs. A space model was created to help determine space needs based on the program needs. An analysis of existing space, the existing facilities audit, and a study of the site all contributed to the master plan study.

The master plan provides a road map for Lamar Community College moves forward into the future.

JBA's role on the project was programmer, planner, project manager and project architect.

Budget: N/A

Date: 2008
